Abstract—*Use of land in most technical farming methods i.e. Agro forestry conserve soil erosion.*

- *Shelter belts methods for coastal region for eastern and western areas.*
- *Minimizing overgrazing of live stocks.*
- *Control on mining activities that leads to destruction of flora and fauna.*
- *Preservation & Restoration of forest & land areas by governing bodies.*
- *Construction of Dams & Barriers across river.*
- *High polluting industries like Bauxite and cement should be checked.*
- *Remediation; non-decay products should be banned like plastic.*
- *Environmental Mitigation should be planned by governing bodies related natural resources.*
- *Aforestation programs should be organized regularly.*
- *Sustainable land usage should be promoted.*
- *Use of alley cropping & intercropping conserve erosion in hilly slopes.*
