

CHAPTER-8

Future Scope

-
- i. The empirical research needs to be replicated in similar or different research locales to get the interaction and variance of variables more standard and stable.
 - ii. Inclusion of more number of innovative and relevant frameworks can be done for future.
 - iii. An independent research on policy research on the above selected crop enterprise can go a long way for better socialization and relevant intervention.
 - iv. An configuration can be possible if future research can include a new paradigm and same enterprise or same paradigm with new enterprises for its dynamic modeling in the wider purview
 - v. The stewardship function of pulse crops needs to re-explored through farmers' participatory research and action.

- vi. The cost-opportunity comparison can add a new flavor to this kind of research where in complementary or competitive crops are confronting with each other in the same agro-ecology.
- vii. Climate change mitigation and adaptation research in Agriculture should focus more on pulse crops.
- viii. Socio-ecological agenda should be well placed in formulating future research for standardizing entrepreneurships of pulse and rice cultivation in a synergistic matter.
