ABSTRACT

E-learning education is a tool that will help you reduce the costs of education. Taking online course one can not only save money but take out some time for other miscellaneous activities. When the training is provided in digital format it is economical because online learning content is quite cheaper compared to all the printed content for traditional classroom training. Online course completely takes away all the costs gone into the premises and equipment, which are actually needed in compound places. In e-learning, full attention is given to the student than the teacher, whereas in classroom, teachers don't render as much time to discuss project. Also dubbed as learner-centered education, student centered learning focuses on skills that allow lifelong learning and constructing meaning from new information. One can increase workplace productivity through e-learning. It is indeed the best way to enrich performance so that employees would feel more productive. You can't ask the teacher to take a pause and stop the lecture but e-learning lets you stop and start, replay and review as many times as you like. During the traditional teaching, there is a lot of information proffered in a short span of time which makes it difficult to pay attention to any student/employee. E-learning on the other side automatically reduces the time constraints and helps you decide how much one can grasp in a time. This is the best option for employees who barely get time to do such course in a busy schedule. Remember how many tools and equipments you have to arrange in an operating room and how much money goes in bringing them. Undoubtedly, it would cost you a lot. Online environment never lets you fret about all these things rather fulfill your needs in a best possible way. You can record the lecture and save it for later purpose. This will enable students enliven themselves on information that could be forgotten after a traditional classroom training. You can review the content and look back at skills to reduce the errors and improvise the quality. Anyone can gain skills and knowledge any point of the age without the restrictions of a traditional course. Young and old both can learn a new skill and improve their career progress.
