Abstract

Objectives: This study examines the Aggressive behaviour of adolescents in relation to their family environment.

Methods: For this study 100 participants were selected from Ganderbal district of Kashmir with age range from 15yrs to 18 yrs. Guru Pyari Mathur and Raj Kumari Bhatnagar Aggression scale (2004) was used for measuring aggressive behaviour and The Family Environment Scale (FES) by Moos and Moos (1976) was used to measure the social and environmental features of family. The data was collected and is being analyzed. Appropriate statistical techniques will be applied by using SPSS (Statistical package for social sciences) version 20 for drawing results and conclusion from given data.

Results: As per data is being analyzed result will be shown in full length paper.

Conclusion: The study will be helpful in highlighting the importance of Family environment on adolescent aggression which in today's world is becoming a serious threat to the well being of family and the society at large.

Keywords: Family environment, Aggression, Adolescents.
