

Chapter-6

Future Scope of Research

S Das, S K Acharya, A Biswas and G C Mishra

The present study has been conducted in a very small area. All though the study has opened up new direction to explore different dimensions related with the study. These can be explained as follows:

- Enterprise Ecology can be studied by using robust statistics.
- Co-integration of different factor of production can be contributed to a better, higher, complex ecological study.
- Different ecological components like social, biological, managerial can be incubated as well as hybridized through a clandestine data mixing to form robust enterprise ecology.
- The innovative area like social intelligence, social capital, social ecology, market ecology, supply chain anatomy, entrepreneurial motivation etc. can pave a new visit from study on enterprise ecology.
- Ecological modelling of enterprise process will provide a system vision on multidimensional scaling.
